VAJID SHAIK

DEVOPS ENGINEER

Hyderabad, India | +91 9640781856 | shaikvajid484@gmail.com
LinkedIn: linkedin.com/in/vajid-shaik | GitHub: github.com/VajidShaik44 | Portfolio: vajidshaik44.github.io

Professional Summary

DevOps Engineer with 2 years of experience automating CI/CD and operating production applications across dev, UAT and production on AWS and Linux; hands-on with Kubernetes, Terraform and observability through projects.

Technical Skills

Production experience: AWS (EC2, S3), Ubuntu/Linux, GitHub Actions, Jenkins, Maven, Java WAR/Tomcat, Nginx (reverse proxy, SSL/TLS, load balancing), systemd, PM2, Bash, MySQL, MongoDB, Redis, ELK, Git.

Hands-on (projects): Docker, Kubernetes/K3s, Helm, Prometheus, Grafana, Trivy, GHCR, Terraform, Ansible, AWS (VPC, ALB, Auto Scaling, RDS, IAM, CloudWatch), GitHub OIDC.

Professional Experience

DevOps Engineer

Zerocode Innovations Pvt Ltd | Hyderabad, India | Dec 2024 - Present

- Manage dev, UAT and production environments, supporting 20+ production deployments per month.
- Replace manual pull-build-restart deployments with push-triggered GitHub Actions pipelines (install, build, SSH deploy).
- Build Java WAR apps with Maven on Tomcat via Jenkins; store and retrieve build artifacts in S3.
- Maintain 9 Java services under systemd (migrated from nohup) for auto restarts and proper logging.
- Manage SSL/TLS renewals across 20+ domains; configure Nginx reverse proxy and load balancing.
- Write Bash monitoring scripts on systemd timers with Google Chat alerts for MySQL health and threads.
- Automate MySQL backups with cron-based scripts.
- Build ELK pipelines that ingest MySQL data into Elasticsearch and use GoAccess for traffic reporting.
- Administer MySQL, MongoDB and Redis, and troubleshoot deployments, HTTP errors, SSL/TLS, disk and memory issues.

Projects

CI/CD to Kubernetes with Helm and Monitoring

Stack: Java Spring Boot, Docker, GitHub Actions, Trivy, GHCR, Kubernetes (K3s), Helm, Nginx Ingress, Prometheus, Grafana

- Build and test a Spring Boot service with GitHub Actions on every pull request; build a Docker image tagged with the commit SHA, scan it with Trivy (failing on HIGH/CRITICAL) and push it to GHCR.
- Package the service as a Helm chart with dev and prod values, Ingress, HPA, resource limits and readiness/liveness probes.
- Deploy to K3s with helm upgrade --install (rolling updates) and a documented helm rollback.
- Monitor the workload with kube-prometheus-stack, a Grafana dashboard and Prometheus alert rules for pod restarts and error rate.

AWS Infrastructure with Terraform, Ansible and CI/CD

Stack: AWS, Terraform, Ansible, GitHub Actions, CloudWatch

- Provision a VPC with public and private subnets across two AZs, an ALB, an EC2 Auto Scaling group and RDS MySQL using reusable Terraform modules, with remote state in S3 and DynamoDB locking.
- Apply least-privilege IAM roles and security groups for the application and database tiers.
- Configure servers with Ansible roles: Nginx reverse proxy and the application as a systemd service.
- Run terraform fmt, validate, tflint and a security scan on every pull request, post the plan on the PR and apply on merge with approval, authenticating to AWS through GitHub OIDC; set CloudWatch alarms with SNS notifications.

Education

B.Sc. in Computer Science | Medha Degree College (Yogi Vemana University) | Kadapa | Aug 2021 - Jun 2024
