Professional Summary

DevOps Engineer with about 2 years of experience automating CI/CD, deploying and operating business-critical production applications across dev, UAT and production on AWS and Linux; recently deployed a containerised app to Kubernetes (K3s) with automated build, scan and release pipelines.

Technical Skills

Production experience: AWS (EC2, S3), Ubuntu/Linux administration, GitHub Actions, Jenkins, Maven, Java WAR/Tomcat deployments, Nginx (reverse proxy, SSL/TLS, load balancing), systemd, PM2, Bash, MySQL, MongoDB, Redis, ELK, Git.

Hands-on (projects): Docker, Kubernetes/K3s, Helm, Nginx Ingress, Prometheus, Grafana, Trivy, GHCR, Terraform, Ansible, AWS IAM/VPC.

Professional Experience

DevOps Engineer

Zerocode Innovations Pvt Ltd | Hyderabad, India | Dec 2024 - Present

- Manage dev, UAT, and production environments for business-critical production applications, supporting 20+ production deployments per month.
- Replace manual multi-step deployments, where a DevOps engineer pulled code on the server, installed dependencies, updated the database, built, and restarted the app, with push-triggered GitHub Actions pipelines that install dependencies, build, SSH to the server, and deploy the latest code.
- Build Java WAR applications with Maven on Tomcat using Jenkins, and store and retrieve build artifacts from S3.
- Configure Nginx reverse proxy, SSL/TLS, and load balancing; manage application services with systemd.
- Create Bash monitoring scripts with Google Chat alerts, schedule them on systemd timers, and alert on MySQL health and thread conditions.
- Administer MySQL, MongoDB, and Redis; use ELK for log analysis and GoAccess for traffic reporting.
- Troubleshoot deployment and application availability, HTTP errors, SSL/TLS, disk and memory issues.

Projects

BlogCMS: CI/CD and Kubernetes Deployment | Live: cmsapp.duckdns.org

Go, Vue.js, MySQL, GitHub Actions, Trivy, GHCR, K3s, Nginx

- Cloned, deployed, and operate this open-source application; I did not write it.
- Added GitHub Actions checks for the backend and frontend; published verified GHCR images after Trivy scans reported 0 HIGH/CRITICAL findings.
- Deployed API and frontend workloads to a single-node K3s cluster behind host Nginx with Let's Encrypt HTTPS; connected MySQL and a persistent uploads volume.
- Verified public frontend and API readiness endpoints returned HTTP 200.

End-to-End CI/CD Pipeline with Kubernetes

GitHub Actions, Docker, Kubernetes, Helm, Nginx Ingress, Prometheus, Grafana, Linux

- Build Docker images in a GitHub Actions pipeline and deploy them to Kubernetes with Helm.
- Expose the application through Nginx Ingress.
- Monitor workloads with Prometheus and Grafana dashboards in a Linux environment.

Education

B.Sc. in Computer Science | Medha Degree College (Yogi Vemana University) | Kadapa | Aug 2021 - Jun 2024
