Professional Summary

DevOps Engineer with 2 years of experience automating CI/CD and operating business-critical production applications across dev, UAT and production on AWS and Linux; hands-on with containers and Kubernetes through personal projects.

Technical Skills

Production experience: AWS (EC2, S3), Ubuntu/Linux, GitHub Actions, Jenkins, Maven, Java WAR/Tomcat, Nginx (reverse proxy, SSL/TLS, load balancing), systemd, PM2, Bash, MySQL, MongoDB, Redis, ELK, Git.

Hands-on (projects): Docker, Kubernetes/K3s, Helm, Nginx Ingress, Prometheus, Grafana, Trivy, GHCR.

Professional Experience

DevOps Engineer

Zerocode Innovations Pvt Ltd | Hyderabad, India | Dec 2024 - Present

- Manage dev, UAT, and production environments, supporting 20+ production deployments per month.
- Replace manual server-side pulls, dependency installs, database updates, builds, and restarts with push-triggered GitHub Actions pipelines that install, build, and deploy over SSH on each push.
- Build Java WAR applications with Maven on Tomcat using Jenkins; store and retrieve build artifacts in S3.
- Maintain 9 Java services migrated from nohup to systemd for automatic restarts and proper logging.
- Renew SSL/TLS certificates across 20+ domains; configure Nginx reverse proxy and load balancing.
- Build Bash monitoring scripts with Google Chat alerts on systemd timers, covering MySQL health and thread conditions.
- Maintain cron-based automated MySQL backup scripts.
- Build ELK pipelines that ingest MySQL data into Elasticsearch; use GoAccess for traffic reporting.
- Administer MySQL, MongoDB, and Redis; troubleshoot deployments, HTTP errors, SSL/TLS, disk, and memory issues.

Projects

BlogCMS: CI/CD and Kubernetes Deployment | Live: cmsapp.duckdns.org

Go, Vue.js, MySQL, GitHub Actions, Trivy, GHCR, K3s, Nginx

- Deploy and operate the open-source CMS without claiming application authorship; handle its CI, scanning, Kubernetes setup, and HTTPS configuration.
- Add GitHub Actions checks for backend and frontend; publish verified GHCR images after Trivy scans report 0 HIGH/CRITICAL findings.
- Deploy the API and frontend to a single-node K3s cluster behind host Nginx with Let's Encrypt HTTPS, MySQL, and a persistent uploads volume.

End-to-End CI/CD Pipeline with Kubernetes | [GITHUB LINK]

GitHub Actions, Docker, Kubernetes, Helm, Nginx Ingress, Prometheus, Grafana, Linux

- Build Docker images in a GitHub Actions pipeline and deploy them to Kubernetes with Helm.
- Expose the application through Nginx Ingress.
- Monitor workloads with Prometheus and Grafana dashboards in a Linux environment.

Education

B.Sc. in Computer Science | Medha Degree College (Yogi Vemana University) | Kadapa | Aug 2021 - Jun 2024
