VAJID SHAIK

DEVOPS ENGINEER

Hyderabad, India | +91 9640781856 | shaikvajid484@gmail.com
LinkedIn: linkedin.com/in/vajid-shaik | GitHub: github.com/VajidShaik44 | Portfolio: vajidshaik44.github.io

PROFESSIONAL SUMMARY

DevOps Engineer with hands-on experience supporting CI/CD for multi-service Java applications, AWS infrastructure, and Linux deployments. Automated build-to-deployment workflows to reduce manual release steps and improve consistency. Experienced with GitHub Actions, Jenkins, Terraform, AWS, Docker, Kubernetes, and production troubleshooting.

TECHNICAL SKILLS

Cloud and networking: AWS (EC2, S3, IAM, VPC, Security Groups), Nginx, SSL, load balancing

CI/CD and automation: GitHub Actions, Jenkins, Bash, systemd, artifact storage and deployment workflows

Infrastructure as code: Terraform, Ansible, version-controlled infrastructure

Containers and orchestration: Docker, Kubernetes (Deployments, Services, Ingress, rolling updates, replica scaling)

Systems and scripting: Linux (Ubuntu), Bash, systemd, Git

Data and monitoring: MySQL, MongoDB, Redis, log monitoring, Prometheus, Grafana

PROFESSIONAL EXPERIENCE

DevOps Engineer (previously Trainee DevOps Engineer)

Zerocode Innovations Pvt Ltd | Hyderabad, India | Dec 2024 - Present

- Build and maintain GitHub Actions and Jenkins pipelines for multi-service Java WAR applications, automating builds, artifact storage in Amazon S3, and deployments across multiple servers.
- Automated build-to-deployment workflows to reduce manual release steps and improve deployment consistency.
- Manage AWS infrastructure including EC2, S3, IAM, VPC, and Security Groups; maintain repeatable provisioning with version-controlled Terraform configurations.
- Configure Nginx reverse proxy, SSL, and load balancing; support Linux deployments and services using Bash and systemd.
- Containerize applications with Docker and deploy workloads to Kubernetes using Deployments, Services, and Ingress; perform rolling updates and replica scaling.
- Administer MySQL, MongoDB, and Redis in staging and production; monitor logs and troubleshoot deployment and application issues.

PROJECTS

BlogCMS - full-stack application and deployment | Go, Vue.js, MySQL, Nginx, systemd, Ubuntu Linux

- Built and deployed the Go API and Vue frontend to an Ubuntu VPS; configured Nginx to serve static files and reverse-proxy API requests, systemd to manage the API, and HTTPS with Let's Encrypt.
- Diagnosed and fixed a concurrent map-write failure in the Go API rate limiter.
- Planned next phase: containerize the API and frontend with Docker and deploy the application to Kubernetes. This phase is not yet complete.

AWS DevOps automation projects | AWS, Terraform, Jenkins, GitHub Actions, Prometheus, Grafana

- Hands-on repository covering AWS VPC automation, Jenkins high availability, container deployment, observability, and GitHub Actions OIDC authentication.

EDUCATION

B.Sc. in Computer Science | Medha Degree College (Yogi Vemana University) | Kadapa | Aug 2021 - Jun 2024
